Nonprofit Organization Grants:
Coast Guard Office of Auxiliary and Boating Safety
Recreational Boating Safety

Federal Grant Title: National Non-Profit Organization Grant Program
Federal Agency: United States Coast Guard
Funding Opportunity Number: DHS-USCG-2014-001
Type of Funding: Cooperative Agreement
CFDA Numbers: 97.012
CFDA Descriptions: Boating Safety Financial Assistance

Grantee: Foundation for Recreational Boating Safety and Education
Grant Number: 3314FAN140208
Grant Title: Discover Boating Hands-On Skills Training (HOST) Bridging the Gap: A Collaborative Approach to On-Water, Skills-Based Boater Training

Award Amount: $140,000.00

Synopsis:

The Foundation for Recreational Boating and Safety Education has enlisted the support of the National Marine Manufacturers Association and Discover Boating to conduct on water, hands on skills training events at 7 major in-water boat shows around the country during the 2014/2015 boat show "season". This very popular program is made possible through an educational grant from the USCG and the support of numerous marine industry stakeholders. Vessels for the "Discover Boating HOST" program are provided by dealers, manufacturers, boat clubs and boater training schools. The Foundation will also be collaborating with other training organizations and professional instructors to make these types of skills training events more widely available to the boating public. More than 4,000 participants have received on water training with a professional instructor through this program since its inception in 2010.
Discover Boating™ Hands-On Skills Training (HOST)

Bridging the Gap: A Collaborative Approach to On-Water, Skills-Based Boater Training

Wrap-up Report

October 2015

Submitted by

The Foundation for Recreational Boating Safety and Education
231 South LaSalle Street, Suite 2050
Chicago, IL. 60604 U.S.A.
Phone: (312) 946-6200
EXECUTIVE SUMMARY

The Foundation and its team has exceeded its objectives for the fourth consecutive grant cycle - both quantitatively and qualitatively.

HANDS ON SKILLS TRAINING AT BOAT SHOWS (HOST)

The Hands On Skills Training program at boat shows not only teaches critical skills, but motivates participants to seek additional training. In addition, it expands awareness and interest among the industry business community. This feature helps establish a business case that industry support of skills training is not only in everyone's best interest but it also makes great business sense. The strategy is to generate higher levels of engagement within the boating industry to facilitate increased training access and throughput based on the success and public response to the HOST approach.

As outlined below, the boat show events continue to be very successful at proving the efficacy of the HOST approach and its popularity with boaters makes for a very compelling argument.

Boat Show Activities
The team conducted 44 training days with recreational boaters at 10 boat shows versus a budgeted objective of 26 training days at 7 shows or +70% and +43% of objective respectively.

Boat shows continue to be an ideal venue for skills training as evidenced by strong participation and throughput with 1,166 boaters receiving on water instruction with a certified trainer bringing the four year total of participants in the Discover Boating HOST program to 5,082 recreational boaters. (Participation by category and year may be found in EXHIBIT I)

The popularity of the HOST motivates dealers such as Marine Max to provide boats for the training events. We also have been approached by two nationwide boat clubs who are interested in learning how to organize and conduct HOST events at club locations nationwide as a direct result of the boat show events success. This is part of our ongoing tactical efforts to increase the availability of skills training.

PARTICIPANT PROFILES
All participants in the HOST program are required to fill out a 6 question survey as part of the registration process and this element has provided important profile information that support 3 important conclusions:

1. The events attract the right audience
2. Boaters of all experience levels want to learn/improve their skills
3. Boat show events fill a void - there is an alarming lack of availability of skills training nationwide
There’s a pretty even mix of newcomers/beginners (46%) and those who classify themselves as intermediates (45%) or advanced (9%). With the former group, the positive learning experience shows them how easy and how much more fun boating is and with the right skills anyone can do it. This motivates them to adopt a safety mindset and gets them started on the right foot.

We also know it motivates many to seek additional skills training. It’s particularly noteworthy that the desire for skills training remains exceptionally high as 85% of participants tell us they are interested in additional hands on classes and 97% of post-event survey respondents recommend that skills training continue to be offered at boat shows.

When we asked about prior training, only 21% indicated they received training through an existing training organization while 27% indicated they had no prior training at all. The majority (52%) said they learned from friends or were self taught. These responses support the realization of organizations like the US Power Squadrons for example, that participation and interest in traditional training classes has and continues to drop substantially. The encouraging part is that interest and enthusiasm for practical hands on training increases substantially where and when it’s made available. (For additional survey detail please see participant survey results found in EXHIBIT II).

EXPANDING THE AVAILABILITY OF SKILLS TRAINING.
The Foundation’s mission is to increase boating safety and enjoyment and help reduce boating accidents and fatalities through boater education. The goal is to make on water skills training readily available "on demand" for the recreational powerboating community and significantly increase the number of powerboaters who have access to and actually complete a skills training program.

Unfortunately there is an alarming lack of capacity to deliver on water skills training despite claims to the contrary by some prominent safety organizations. Even for those who are otherwise qualified, the lack of consistent access to appropriate boats, facilities and equipment is a primary barrier to entry to the training business. This challenge must be overcome if we are to realize the stated goal.

That will necessarily require the support, engagement and direct involvement of the marine industry business community. They have the closest relationships with and can best reach boaters, they can provide the boats, slips and equipment needed for training and they have the widespread geographic presence to maximize coverage.

A key strategy is to engage boat clubs who have the requisite assets and personnel and teach them how to deliver HOST training classes. The Foundation team also helps them how to organize, promote and conduct the training programs for the public. In the process the Team will help them develop and create collaborative relationships with dealers, marinas and other industry stakeholders who need and want competent capable and available training resources.
Through its efforts during the previous year, the Foundation has developed a HOST blueprint that will facilitate its efforts during the new grant cycle to increase access to skills training.

**Teach 'em How to Fish**
The Foundation and its team conducted 12 total days of instructor orientation training versus a budget of 8 days to teach otherwise qualified powerboat trainers how to organize and conduct the HOST program at multiple venues. The effort produced two entities who've added powerboat training for the public to their core business model and a very large boat club in South Florida who is providing training to its 1,100 member base and to the public as part of its open house promotions.

In addition, the team organized and conducted its first multi-stakeholder event that was a collaborative effort between the State of Connecticut Department of Energy and Environmental Protection's Boating Division, the Connecticut Marine Trade Association, independent NSBC Certified Instructors and a local Marina operator and dealer (Westbrook Marine).

The goal with the latter effort was to test the viability of a true collaborative approach and use the experience to build a workable “how to” strategy for others to follow - particularly independent instructors. There are now additional instructors in the Northeast who have been trained and are interested in providing HOST training both for the public and at multiple events with stakeholders.

This blueprint will facilitate expansion activities funded through the FY 2016 grant as we attempt to grow the number of locations where boaters can get skills training. (Please see Exhibit III for more info about the partnering entities)

**COLLABORATION - ACHIEVING SCALE**
While the continuation of the successful HOST Boat Show Program is vital in its own right, it's also important to improve cooperation among other grantees and other existing safety organizations. The Foundation is very gratified to report that substantial progress has been made over the last 12 months in developing closer working relationships with a number of boating safety organizations and stakeholders. Much of this progress is attributable to the high level of visibility and continuing success of the HOST program at boat shows and our work with other marine business interests. The hope is that the new level of collaboration will produce a force multiplier that will energize the safety community and produce even better results than a solo effort could. For example, The Foundation has reached a specific agreement with the State of CT DEEP Boating Division, BoatUS, NSBC and US Sailing to cooperate on multiple levels for the 2015/2016 Grant cycle. It is also anticipated that the Sea Tow Foundation and additional State BLA’s will partner with the Foundation Team to deliver skills training. (See EXHIBIT IV)
INDUSTRY ENGAGEMENT
The success and outstanding popularity of HOST events at boat shows garners very high visibility within the industry and as a result of that success, interest and support has grown measurably over the last 4 years. The ability to build on the support level is paramount to increasing boating safety. The Foundation’s activities are intended to generate change at the behavioral level of recreational boaters and of marine dealers to imbue a safety first mindset that will extend beyond the classroom and create a recreational boating climate that embraces safe boating habits.

The following are some of the noteworthy highlights.
• National Marine Manufacturers Association represents most of the world’s boat, accessories and equipment manufacturers and is the world’s largest producer of boat shows. Their support of boater education and the Foundation’s efforts in that regard create very high visibility among the "right" audience. They were the first group to provide assistance to the Foundation for HOST events by providing slips, facilities, signs, tents & equipment and marketing/promotion support at all of their in water boat shows at no charge. Estimated dollar value is $7,500 per show
• Boater education has been adopted by the marine industry as one of six key strategies for maintaining and growing boating and participation in boating. There is a committee that represents the industry’s interests in boater education and the Foundation has a 100% endorsement of that group. Some of the increased support of the Foundation’s efforts emanates from that committee.
• Discover Boating is the gateway to the recreational boating community. Its mission is to promote boating and the boating lifestyle and improve the boating experience to increase participation on behalf of the entire marine industry. DB has taken on the role of HOST marketing and promotion agency. Over the course of the last 4 years Discover Boating has substantially increased it focus on boating safety and boater education a clearly evidenced on its website www.discoverboating.com (Also see EXHIBIT V for examples)
• Progressive Boat School was created by Progressive Insurance as a direct result of the HOST Boat Show Program. It feature a wide variety of seminars and boating safety classes for kids through adults. Attendance for most classes are completely free for show visitors
• Carefree Boat Clubs provide boats for training classes at boat shows. They consist of a group of approximately 40 independent operators many of whom the Foundation is working with to teach how to organize and conduct HOST training programs
• Freedom Boat Clubs has supported the Foundation Boat Show events in the past and several locations have participated in HOST instructor training. They use HOST training approach with their members and are tentatively ready to renew their participation with HOST on multiple levels.

- Hands on Learning events appeal to boaters across the experience spectrum
- Specific audiences (experience levels) can be targeted by adjusting event content
Interest in traditional classes offered by existing training organizations continues to wane – that model is losing its appeal among recreational boaters.

The majority of boaters depend on friends or trial and error to learn the requisite skills.

That 27% are boating without having had any training at all reflects the need for a new paradigm that creates a culture of safety based on skills, knowledge and competence.
Boaters of all experience levels want skills training.
The boat show events fill a void in skills training and it is repeatedly mentioned by participants.
There is a tremendous gap that needs to be filled - woefully inadequate resources are available for practical skills training.
Lack of availability continues to be a major challenge that must be addressed.

- Attracting the right audience
  - Existing Boaters
    - Improving skills of existing boaters has an immediate impact on boating safety and enjoyment
    - They’re less likely to leave boating due to intimidation or a bad experience
    - Buyers coming from ranks of existing boat owners
  - Non-owners
    - Introduces newcomers to boating safety and creates the safety mindset from the beginning
    - Skills training promotes participation in boating and increases interest in boat ownership

- The Events attract buyers – an important consideration to get industry stakeholders with business interests engaged (Dealers, Manufacturers, equipment manufacturers and retailers, service providers, etc.)
- Training can be an effective tool for increasing boating participation beyond boat sales (rental, charter, clubs, time shares, etc.)
EXHIBIT III

Training Partners

Cruising Florida Powerboat Academy
This is a newly created powerboat training school whose mission is to provide skills training to the public. They are part of a larger operation that includes a power and sail charter business and a well established sailing school. The team helped them organize and conduct a 3-day kickoff event at the Suncoast boat show following their instructor training and orientation program. They now provide training to the public through regularly scheduled classes along with private skills instruction as a core business operation. In addition, they organize and conduct a HOST type program independently at the St. Petersburg boat show and other local boating events. They are currently working on a collaboration with local marinas and dealers to present additional training events at local venues to promote training and expand their training business.

Passage Nautical
The team conducted two separate instructor training clinics for this well established and respected power and sailboat dealer in the San Francisco Area (Passage Yachts). With an adequate number of trained instructors, they’ve created a powerboat training school that is a core part of their business operations. In addition to training the public commercially, they use the school to train boat buyers, existing customers and as a promotional tool at various venues. They are now able to conduct their own boat show events and participate in the San Francisco Boat Show. They are a bellwether for the marine industry in the Pacific NW. They have a dedicated boat school manager who’s responsible for operations results and are reportedly experiencing moderate growth of their commercial training business.

Powerboat Academy of Florida
This is a new commercial entity created by the Palm Beach Boat Club as an addition to their club operations. The team trained four instructors and the club manager on conducting HOST events and organized a kickoff event for their new school at the Palm Beach Boat show. there was tremendous interest in the boat school and they trained almost 100 persons over the 4 day show. Unfortunately, the club lost three of its original instructors and continues to use the HOST program to train its 1,100 members and use the program as a promotional tool with the public during their open house events. The club owner has indicated an interest in getting additional instructors trained and a desire to revive his powerboat school.
EXHIBIT IV

Collaboration Partners

**BoatUS** and its Foundation has contributed financially to HOST efforts and has promoted HOST events among its members. They’ve sent email invitations to members in the area of each boat show event to make them aware of the learning opportunities and encourage their attendance.

**Connecticut DEEP** has coordinated the organization of a HOST event at the State’s largest lake (Candlewood) by enlisting a local dealer and marina operator. Plans are to conduct the event at the beginning of the 2016 boating season and the State will promote the event with boating safety graduates. In addition, ALL persons who operate a boat in the state are required to have completed a state approved safe boating course and possess a valid state Boater ID card. The state provided a special permit for the Norwalk Boat Show to allow newcomers without the required safe boater card to operate boats with an instructor as part of the Discover Boating HOST Events.

**NSBC** is interested in working with the Foundation and its team to teach graduates of its Marina pro Program how to commercialize their new instructor skills. They want the Foundation team to teach their instructors to organize and conduct HOST events to jumpstart their training business and help sell training "products". In addition, the team intend on using NSBC master trainers whenever there is need for a formal instructor development program, i.e. an "Instructor Training and Certification Program".

**State BLA’s** including Florida and Alaska (and CT) are very interested in the HOST approach and discussions have been initiated on developing a collaboration plan to teach local instructors how to organize and conduct host at state boating venues. The Foundation plans to try to connect with additional states to search for collaboration opportunities.

**US Sailing and US Powerboating** has initiated expressed a high level of interest in teaching its schools and powerboat instructors how to use HOST to promote and sell training. They have already committed to help with several boat show events and expectations are that they will be positioned to significantly expand the number of shows where HOST is a featured event.

**SeaTow Foundation & SeaTow International** have initiated discussions about getting involved with the HOST effort. This applies to boat show expansion and making training more widely available through collaboration with other stakeholder

Safe Boating Quiz

You learned the "rules of the road" before you sat behind the wheel of a car and you should do the same before taking the helm. Just like studying to get your driver's license, it is very important to have the boating information and certifications you need to be a safe boater before you hit the water. In fact, a number of states require powerboat operators to take a boater’s education course and carry a license or certificate proving successful course completion any time they're on the water. By consulting a safe boating guide and obtaining the required certificates beforehand, you not only protect yourself and family but other boaters on the water.

It's just as important to have the right safety gear and equipment on your boat, as required by regulation. Our pre-departure checklist ensures you have everything you need for a day on the water and you can have a safe vessel year round with our semi-annual maintenance guide.
Become “Boat Smart”

Learning the basics of boat operation and safety is best done before your first trip to the marina or launch ramp. In fact, a number of states require powerboat operators to take a boating education course and carry a license or certificate proving successful course completion any time they’re underway.

Resources for You!

The US Coast Guard Auxiliary was established by Congress in 1939, the United States Coast Guard Auxiliary is Semper Paratus (Always Ready).

US Power Squadron was organized in 1914, USPS is a non-profit, educational organization dedicated to making boating safer and more enjoyable by teaching classes in seamanship, navigation and related subjects.

Boat Owners Association of The United States (BoatUS) has worked to provide quality service, savings, and representation to the boating community since 1966. The BoatUS Foundation is the only FREE online safety course developed specifically for individual states.
Safety Related Keywords - SEO RESULTS
